

SURINDER SINGH

Senior Mobile Engineer – Android & React Native

Chandigarh, India | +91 8872415154 | er.surinderbindra@gmail.com | linkedin.com/in/surindersinghbindra | Immediate Joiner

PROFESSIONAL SUMMARY

Senior Mobile Engineer with 10+ years of experience in native Android development (Kotlin, Java, Jetpack Compose) and React Native across EV charging, BLE/IoT connected hardware, payments, taxi dispatch, restaurant POS, and IPTV. At Blink Charging, improved App Store rating from 2.5 to 4.1, achieved 99.5% crash-free users, and led the mobile app through FedRAMP Authorization (certified Jan 2025). Deep expertise in BLE/GATT device communication, payment SDK integrations (3D Secure, EMV), React Native Native Module bridging, and mobile CI/CD and release engineering (Fastlane, GitHub Actions, Xcode Cloud). Led teams of 4-5 engineers working with distributed stakeholders across India, the US, and Europe.

TECHNICAL SKILLS

Languages: Kotlin, Java, JavaScript, TypeScript

Android: Android SDK, Jetpack Compose, MVVM, Clean Architecture, Coroutines, Flow, StateFlow, Hilt, Dagger 2, Room, Retrofit, OkHttp, ExoPlayer

Cross-Platform: React Native, Native Modules (Android/iOS bridging), Android-JS interop

BLE / IoT: Bluetooth Low Energy (BLE/GATT), OCPP, SNMP device discovery, Wi-Fi provisioning, hardware-firmware integration

Payments: 3D Secure (3DS), Worldpay Cardinal SDK, AccessCheckout SDK, EMV / PIN pad, Coinbase Commerce API, fraud prevention

CI/CD & Release: Fastlane, GitHub Actions, Xcode Cloud, Bitrise, AWS Secrets Manager, Play Store, App Store, phased rollouts, release management

Firebase: Crashlytics, App Check, Remote Config, FCM, Realtime Database, Firebase Auth, Analytics

Observability: Datadog Mobile RUM, Firebase Crashlytics, Sentry, crash monitoring, performance optimization

Security & Compliance: FedRAMP, VAPT, Okta SSO, encrypted token storage, GDPR data residency, Google reCAPTCHA Enterprise

Backend & Tools: Java Spring Boot, Node.js, REST APIs, Git, GitHub, Docker, SQLite, WebSocket, MQTT

Practices: Agile, Scrum, TDD, unit testing, code reviews, sprint planning, technical leadership, mentoring

PROFESSIONAL EXPERIENCE

Co-Founder & Senior Mobile Engineering Consultant, EkoBits | Jan 2026 - Present | Panchkula, India (Remote)

- Co-founded a software development and AI automation studio; lead Android (Kotlin, Jetpack Compose) and React Native architecture consulting, BLE/IoT device integrations, and mobile CI/CD and release engineering (Fastlane, GitHub Actions).
- Build AI workflow automation using Claude API, MCP, and local LLM inference, including AI-powered IVR systems and automated release-monitoring pipelines for the Android and iOS ecosystems.

Senior Manager - Mobile Apps (Senior Mobile Engineer), Blink Charging | Apr 2025 - Dec 2025 | Noida, India (Remote)

- Resolved a MasterCard fraud crisis under a hard compliance deadline: implemented Firebase Anonymous Auth + Firebase App Check in guest charging flows so every payment request carried an identity and app-integrity token, closing the card tokenization API to automated bot abuse and eliminating chargeback exposure.
- Integrated 3D Secure (3DS) payments via a custom React Native Native Module bridge for Android and iOS (Cardinal SDK had no React Native support), preserving the native SDK security model.
- Launched Blink in the UK on a dedicated EU backend instance for GDPR data residency, separate from the North America instance (US, Brazil, Mexico, Canada); localized the app for Greece, Netherlands, Germany, and Belgium covering UI strings, date/time formats, and currency.
- Piloted crypto payments via Coinbase Commerce API by extending the Java Spring Boot session-start endpoint with the backend team; phased rollout on selected US chargers.
- Reduced CI/CD cost by replacing Bitrise with Xcode Cloud (iOS) and GitHub Actions (Android); secured pipeline secrets with AWS Secrets Manager; ran biweekly releases with phased rollouts across Play Store and App Store.

Manager - Mobile Apps, Blink Charging | Apr 2024 - Mar 2025 | Noida, India (Remote)

- Led a team of 4-5 mobile engineers; delivered FedRAMP Authorization for the mobile app (certified Jan 2025; verifiable at fedramp.gov/marketplace/products/FR2424553196).
- Drove end-to-end mobile FedRAMP compliance: VAPT testing, replacement of outdated DES/3DES encryption in third-party payment SDKs, encrypted access/refresh token storage, multi-device session invalidation on password change, and Keycloak to Okta SSO migration.

- Migrated the codebase from Bitbucket to GitHub and built GitHub Actions CI/CD pipelines to meet FedRAMP infrastructure requirements, with secrets managed via AWS Secrets Manager.
- Improved App Store rating from 2.5 to 4.1 and achieved 99.5% crash-free users; improved app startup time via on-demand library loading; implemented charger clustering on the map for high-density areas.
- Integrated SemaConnect (acquired company) chargers via Wi-Fi hotspot provisioning using QR-encoded SSID/credentials; automated App Store metadata and release notes with Fastlane on a biweekly release cadence.

Senior Technical Lead - Mobile Apps, Blink Charging | Apr 2023 - Mar 2024 | Noida, India (Remote)

- Owned the full feature lifecycle across customer-facing Android and React Native apps: design docs, cross-team alignment with product/design/backend, technical scoping, and release coordination.
- Architected modular Android systems in Kotlin (Coroutines, Flow, Clean Architecture); contributed Java Spring Boot API work; managed feature-flag rollouts and A/B experimentation via Firebase Remote Config; mentored mid-level engineers through code reviews and TDD.

Technical Lead - Android Apps, Blink Charging | Jul 2022 - Mar 2023 | Noida, India (Remote)

- Built a React Native Native Module for home charger discovery using SNMP OID broadcasts across the charger's Wi-Fi hotspot subnet (device lacked BLE); collaborated with the Liteon (Taiwan) firmware team on custom commands for tighter mobile-device integration.
- Built a full Android + iOS Native Module bridge for Worldpay (Cardinal SDK + AccessCheckout SDK), which had no React Native SDK, enabling secure in-app payment flows.

Lead Mobile Application Developer, gNxt Systems (client: Blink Charging) | Jun 2021 - Jun 2022 | Noida, India

- One of the first engineers building Blink Charging's India mobile team, reporting to the CXO; debugged real-time OCPP session desync across charger-backend-mobile, fixed the charging session lifecycle (start, in-progress, complete, failed), and resolved FCM delivery and OEM background-handling issues.
- Modernized the legacy codebase incrementally: Java to Kotlin migration, callbacks to Coroutines, MVVM with ViewModel/StateFlow, Dagger 2 to Hilt; eliminated memory leaks, race conditions, and lifecycle crashes; improved logging and production diagnosability.

Senior Software Engineer - Mobile, TechRyde | Jan 2020 - Jun 2021 | Noida, India

- Led Android engineering for a restaurant technology suite serving USA, Canada, UK, and Philippines: tablet Order Taker, kiosk self-ordering for large displays, Kitchen Display System, EMV/PIN pad payment collection, and real-time menu availability sync.
- Travelled on-site to St Albans, UK to integrate the delivery order app with PizzaHut UK's Oracle MICROS POS, surfacing delivery orders directly inside the in-store POS without workflow disruption.

Android Developer, TechRyde | Jun 2019 - Dec 2019 | Noida, India

- Built an enterprise Order Taker app (Shift4 payment gateway, Firebase Realtime Database sync across tablets) and a table-side Quick Order self-ordering system for a leading Philippines food chain with MQTT-based real-time menu updates.

Senior Android Developer, Smart IT Ventures | Oct 2017 - May 2019 | Rupnagar, India

- Modernized a 5-year-old Eclipse-era codebase into a production dispatch platform serving 20,000+ licensed NYC drivers (My Taxi Ride, 5-star rated): driver ID verification with Camera2 + ML Kit, real-time dispatch via Firebase Realtime DB + WebSocket, SIP in-app calling, and emergency SOS with live location.
- Delivered MTR Transit (Dominican Republic) real-time bus tracking with live ETAs, EzeFind offline-first inventory app (Florida, USA), and Hello Car taxi booking (Pakistan); attended AppDevCon 2019 (Amsterdam) for Android and mobile engineering workshops.

Android Developer, Think 360 Solutions | Aug 2016 - Sep 2017 | Chandigarh, India

- Built StreamLine TV, an Android TV IPTV app for STB devices (USA/Canada) with full EPG, ExoPlayer, and FFmpeg; E-Scooty BLE-connected electric scooter app (Norway) with GATT discovery and full ride lifecycle; eCarUp EV charging station finder with payments (Sweden); and CMG anti-tamper work-hours tracker (Spain).

Junior Android Developer, Techwin Labs | Aug 2015 - Jul 2016 | Mohali, India

- First engineering role; built Android applications across salon management and consumer app verticals.

Early Career (Non-Software)

- Network Engineer, HCL Services | Apr 2014 - Oct 2014: EPABX field support and PBX systems troubleshooting.
- RF Optimization Engineer, Idea Cellular | Oct 2010 - Jan 2013: 2G/3G network coverage optimization and regulatory compliance.

EDUCATION

Bachelor of Technology (B.Tech), Electronics and Communications Engineering

Punjab Technical University | 2006 - 2010
